White House Open Data Innovation Summit

Solutions Showcase and Storytelling Stage

Room 146C

The White House Open Data Innovation Summit reveals the power of data by the people, for the people, showcasing how opening information helps to tackle the biggest challenges of our democracy. Open data strengthens the broader civic community through technology and citizen engagement, co-creating positive change. The Solutions Showcase and Storytelling Stage will feature these human dimensions with exhibits by trailblazers in the open data movement and discussions around how civic participation has shifted the dialogue between the government and its citizens. On this stage you can also learn how to tell your own open data story. Join us!
